Wi-Fi network: Manual configuration
(Windows 7 / Windows 8)

Please remove any previously stored eduroam connections first (instruction see page 2)!

1. Right-click the network symbol at the right side of the Windows task bar and go to Open Network and Sharing Center.

2. Open Set up a new connection or network.

3. Choose Manually connect to a wireless network. Click Next.

4. Enter eduroam as Network name and choose WPA2-Enterprise as Security type. Click Next.

5. Click Change connection settings.

6. Go to tab Security and open Settings.

7. Please deactivate Verify the server’s identity by validating the certificate. Click Configure ... afterwards.

8. Make sure that this flag is unchecked. Click OK. Then close the Protected EAP Properties dialog from step 7 with OK.

9. Then open the Advanced settings.

10. Select User authentication and click Save credentials.

11. Enter your UserID followed by @univie.ac.at (e.g. zufallr0@univie.ac.at) and password. Click OK.

12. Click OK to close the Advanced settings dialog. Afterwards the system should be connected to the eduroam network.
Wi-Fi network: Network removal

Windows 7

1. Right-click the network symbol at the right side of the Windows task bar.

2. Open the Networks list.

3. Right-click the eduroam network and select Forget this network.

4. Click Yes to remove the network.

Windows 8

1. Open the Networks list.

2. Right-click the eduroam network and select Forget this network.
